SUMMARY

Seasoned Software Developer with 15+ years of hands-on experience creating scalable, high-performance web solutions. Expert in WordPress development, PHP, and API integrations, with a focus on SEO and WCAG compliance. Known for delivering impactful digital products across industries by blending technical precision with user-centric design.

EXPERIENCE

WordPress Developer

Freelance - 05/2024 – Present

- Developed, and maintained hundreds of websites, for a diverse portfolio of clients ranging from education and entertainment to regional marketing initiatives, helping Quebec businesses strengthen their digital presence and connect with target audiences.
- Engineered and implemented an automated content syndication solution using the WP REST API, allowing seamless publishing from a primary WordPress site to two secondary platforms, reducing manual effort and ensuring consistent content delivery.
- Architected and deployed a WP website that integrates with Web3 applications, and a custom scheduled API polling to fetch pricing data. Reducing latency, lowering dependencies, and enhancing overall performance.
- Engineered hundreds of custom WordPress plugins and themes for responsive, high-performance websites with seamless integration of APIs and third-party libraries. Which enhanced functionality, scalability, and user experience across devices.

Software Developer

Resulta - 01/2021 – 02/2024

- Led the ongoing development and maintenance of a robust, full-stack web application built with ReactJS, GraphQL, Python, and Django. Ensuring seamless performance, scalable architecture, and clean code across both front-end and back-end components.
- Redeveloped a ReactJS based website into a WordPress-powered platform, and engineered multiple custom plugins, including a complex solution that connects to four distinct APIs for dynamic data retrieval and consumption. Also implemented a secure Stripe powered payment system to facilitate seamless service transactions.
- Led development of a multi-API integration platform used across 100+ sites. Using Doctrine, WordPress and PHP to reduce manual data entry and human error by 80%.
- Developed custom code for over 30 websites, consistently delivering tailored solutions to meet diverse client needs.
- Stepped into a leadership role as acting team lead when required, ensuring smooth project execution and team coordination.
- Mentored junior developers in best web development practices, directly contributing to a 30% increase in team efficiency and nurturing a supportive, knowledge-sharing environment that elevated overall team performance.
